Attack Surface Analysis

The diagram illustrates the components of an Attack Surface Analysis. It features a central node, 'Internal Attack Surface', which is connected to 'Internal systems'. To the left of this central node, there are two main categories: 'External Attack Surface' and 'Internal Attack Surface'. The 'External Attack Surface' is further divided into 'Attack Surface' and 'Internet assets'. The 'Internal Attack Surface' is divided into 'Asset Inventory' and 'Asset list'. Below these, there are several specific attack vectors: 'Public API', 'Public interface', 'Open Port', 'Network access', 'Physical Attack Surface', 'Physical devices', 'Cloud Storage Exposure', and 'Exposed data'. To the right of the central node, there are several mitigation strategies: 'Unpatched Software', 'Missing updates', 'Digital Attack Surface', 'Software & APIs', 'Attack Surface Reduction', 'Reduce exposure', 'Human Attack Surface', 'Users & employees', 'Misconfigured Server', 'Wrong settings', 'Attack Surface Analysis', 'Find vulnerabilities', and 'Default Credentials', 'Default pass'. A blue checkmark icon is visible in the bottom right corner of the diagram area.
